

Client / Private Client

Location / Newmarket

Value / \$2 million

Services / Structural Engineering

This unique residence is located on a steeply sloping site in the Brisbane suburb of Newmarket. The client's brief was to create a modern, open-plan residence that would capture views of Brisbane from its hillside perch. 'Minimal structure' was the brief from the architect, and in response we created slim floating floor slabs, cantilevered balconies and floor to ceiling frameless glass walls.

The house is constructed from exposed concrete, carefully detailed in-situ. McVeigh engineers worked closely with the architects to ensure that the detailing of the concrete was both buildable and in line with the architectural intent for the building.
